

ZixDirect™

Secure email direct to the inbox.
Anywhere. Anytime.

Email Encryption Direct to the Inbox

Sending and receiving encrypted email has never been easier. ZixCorp is expanding the proven security of ZixVPM® with ZixDirect, a method to conveniently send encrypted messages directly into a recipient's inbox.

Adding ZixDirect is easy. Your ZixVPM system administrator simply clicks on a check box. Once selected, emails sent to recipients without ZixCorp capabilities will receive their secure messages directly in their inboxes. There's no need to go to a dedicated portal or to download special software. Plus, messages can be read even if the recipients are working offline.

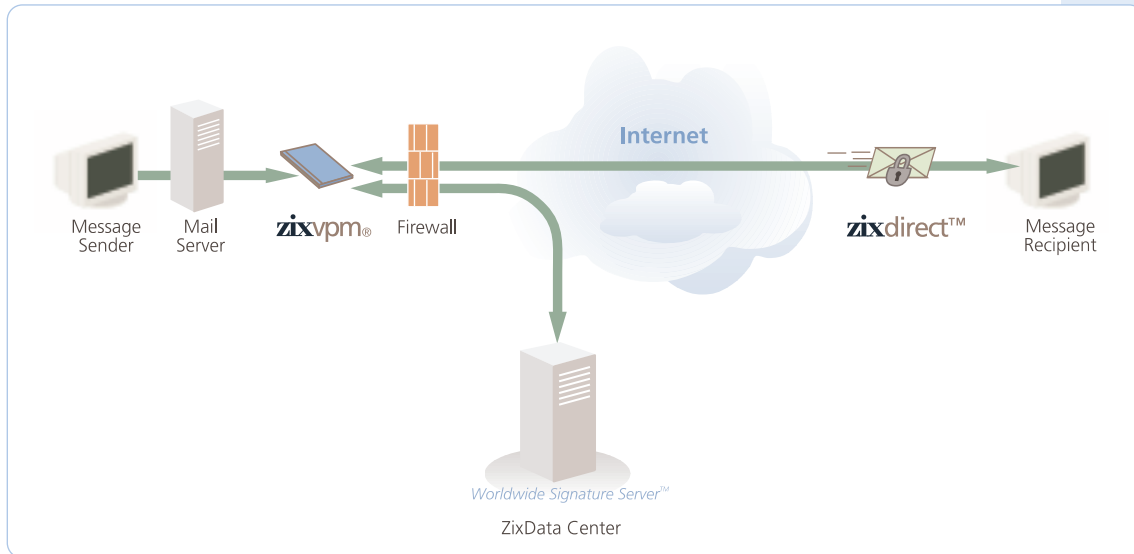

Send secure messages directly to a recipient's email inbox with ZixDirect.

BENEFITS

- Secure messages sent directly to recipient's email inbox
- Offline access to secure messages
- Ability to send encrypted email to anyone
- No additional software or training required
- Messages are readable only by the sender and the intended recipient
- Works seamlessly and easily with existing network infrastructure and today's most popular email environments
- Easy to deploy in just a few hours

FEATURES

- Automatic retrieval and distribution of encryption keys through the ZixData Center™
- Custom branding of messages
- Secure reply and reply to all capability
- Ability to recover messages if password is forgotten
- Protected with 3DES 168-bit encryption
- Extension of ZixCorp's proven Best Method of Delivery™ protocol

ZixDirect eliminates the need for an external Web portal and ensures a private, two-way conversation.

Privacy and Compliance — Quick and Easy

ZixDirect is ideally suited for organizations trying to ensure compliance with federal regulations and protect the privacy of customer data.

ZixDirect makes it easy to send data securely to anyone, anywhere. Whether it's communicating consumer credit information, patient data, or delivering monthly statements, ZixDirect is an ideal solution for securing email communications.

Recipient Convenience

ZixDirect is an extension of ZixCorp's Best Method of Delivery, which determines the most efficient way to deliver secure email based on the sender's policies and the recipient's environment.

With ZixDirect, your ZixVPM administrator creates a policy that "pushes" encrypted email messages directly to the inboxes of users who do not use ZixCorp services.

The secure message arrives as an HTML attachment within an email. The user simply clicks on the attachment, enters a password and the message is decrypted in his/her local browser. Messages are stored encrypted and can be read even when the recipient is offline.

Message Delivery Flexibility

Directing users to your branded ZixPort® Web portal remains a ZixVPM option. You decide which method best fits your requirements. Or use both methods to meet the needs of different users. For message recipients served by their own ZixVPM or ZixMail® service, the delivery method remains unchanged.

ZixDirect takes the confidential data delivery businesses need and pairs it with the customer-friendly expediency of direct inbox delivery. It's the optimum easy-to-use, send-to-anyone secure email solution.

ABOUT ZIXCORP

ZixCorp is the leading provider of hosted email encryption and e-prescribing services. ZixCorp's email encryption services provide an easy and cost-effective way to ensure customer privacy and regulatory compliance for corporate email. Its PocketScript® e-prescribing service reduces costs and improves patient care, by automating the prescription process between payers, doctors and pharmacies.
