

# Hosted ZixVPM Service

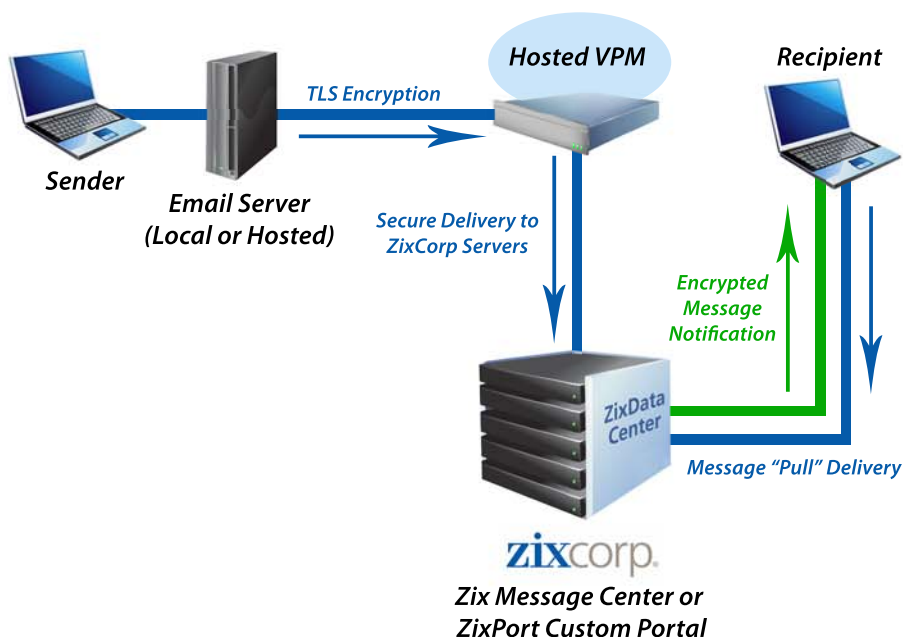

For the nation's most influential institutions, ZixCorp's Email Encryption Service is an important tool in the protection of sensitive data. Leading healthcare, financial, government and insurance organizations have turned to ZixCorp to help them meet mandatory regulatory requirements and protect customer privacy in all their email communications. ZixCorp's unmatched Email Encryption Service allows customers to communicate seamlessly and securely.

Each ZixCorp customer is enrolled in the ZixDirectory, our global repository with more than 20 million members. With ZixDirectory, customers eliminate the need to build their own directory of encryption keys to communicate securely with their partners and customers. ZixCorp's Email Encryption Service is easy-to-use and is the leading encryption service in the industry today.

Email encryption can be complicated and expensive, but ZixEncryption.com offers hosted solutions that are easy and affordable. A hosted encryption solution provides all the benefits of an on-premise hardware solution, like policy based encryption for HIPAA, SOX, GLB, and PCI, at a fraction of the cost. Protect all your email users, ensure compliance, and keep ongoing costs down with a hosted encryption solution from ZixEncryption.com.

*A Hosted ZixVPM solution integrates easily with existing local or hosted email systems. Using a secure TLS connection to your existing infrastructure, we'll scan your outbound email for sensitive information, encrypt if necessary, and send it on to the final destination. Your internal users don't need to install any complicated software, and our dedicated engineers are there to assist you with minor configuration changes to begin the service.*

## Who uses ZixCorp's Email Encryption Service?

- Federal banking regulators (FFIEC)
- The Conference of State Bank Supervisors
- Members of the American Bankers' Association
- 30 Blue Cross Blue Shield organizations
- Health insurers protecting data for more than 70 million people
